

Career Opportunity Assistant Air Monitoring Manager

AirLogics, LLC is currently seeking a full-time **Assistant Air Monitoring Manager** to support our growing operations. This position will involve travel, but will largely be based out of our world headquarters in West Berlin, New Jersey.

As an **Assistant Air Monitoring Manager**, you will report to and assist our Senior Technical Specialist, who has been with the firm for 26 years. You will work with him and the other staff at AirLogics to execute key project functions on time, under-budget, and to the satisfaction of our clients.

Key Attributes:

- Excels at multi-tasking and managing multiple projects, deadlines, deliverables, communications from different channels (email, voice, text) in a dynamic work environment that is focused on exceeding client expectations.
- Adept at dealing with people in a professional manner - because people and relationships matter. Direct client communication is commonplace at AirLogics.
- Comfortable with working with electronic instrumentation - because our business utilizes highly sophisticated air sensors, on-board computers, communications electronics, batteries, and other devices. (Note: we will train you on this equipment, but we need someone with an aptitude for working with instrumentation.)
- Flexible - because schedules and plans can change.
- Able to lift up to 50 lbs.

Key Responsibilities:

- Ensure client satisfaction.
- Deliver, setup, and train clients on the systems and equipment offered by AirLogics.
- Manage the technical and financial aspects of an air monitoring project under the supervision of highly experienced professionals and subject matter experts.
- Review and interpret data collected by our air monitoring systems.
- Communicate proactively, effectively, and timely with clients and team members.
- Follow Site-specific health & safety plans.

Other Occasional Responsibilities:

- Troubleshoot existing air monitoring instrumentation and systems on project sites.
- Attend professional events, conferences, and networking events to build the business.
- Participate in thought-leadership (papers, presentations, technical forums).

Qualifications:

- College degree in earth, environmental, atmospheric, or general sciences
- Ability to independently perform and manage multiple tasks
- Strong oral communication skills, problem solving, and organizational skills.
- A valid driver's license in good standing.
- OSHA 40Hr HAZWOPER Certification preferred

How to Apply

About AirLogics

AirLogics occupies a unique place in the environmental consulting and air monitoring sector. Our company was formed from a top-tier environmental consultancy that was trying to help a client manage their risk on a remediation site. In developing a solution to reduce their risk, an innovative and patented air monitoring system was born. From there, a company was built around that system. What evolved was a company that appears to be a rental equipment company, but functions like and has the sensibilities of a professional consulting firm, including the professional staff, expertise, and attention to solving our client's problems. We are proud of the position that AirLogics occupies in the environmental and air monitoring space.

AirLogics is a division of GZA GeoEnvironmental, Inc.
